

# HIV Continuum of Care, Connecticut, 2016

Based on persons receiving HIV care in 2016 among persons ≥13 years old at diagnosis, resided in Connecticut (based on most recent residence) and diagnosed with HIV infection through 2015 and living with HIV on 12/31/2016. A visit is defined as a CD4, viral load, or genotype test result during the evaluation period. The overall HIV population is overestimated because cases are only followed up for 11 months after 12/31/2016. CDC suggests cases should be followed up at least 18 months to collect death certificate information. Source: HIV surveillance data through December 2017.

Based on the number of persons ≥13 years old, diagnosed with HIV in 2016, who resided in Connecticut (based on residence of HIV diagnosis) and were linked to care within 1, 3, 6, 12 months after HIV diagnosis. Source: HIV surveillance data through December 2017.
